Stage of voluntary: Level 2 to 1 in mental arithmetic

During this stage of warm-up period, children are preparing and building the foundation before they start to achieve Advanced Level exam system.

✘ At this stage, most children can practise voluntarily, however, they still need teachers and parents to encourage and praise them. How to enhance children's accuracy and speed in calculating is still of importance at this stage of training. It's also important to train children to achieve the goal in an effective way, with good behaviour and a responsible attitude for everything.

At this stage, children are preparing for the elite level. Therefore children's voluntary attitude is an important key. Children can start to be taught how to self-educate and correct the practising works that they have done.

Stage of development: Level 1 to 4 in mental arithmetic

At this stage, children will have already reached the beginning level of "elite character." This is a good time to bring their skill in abacus mental arithmetic into full play. Besides practicing, have children frequently participate in exams and competitions in abacus mental arithmetic to enhance their skills in mental arithmetic. Moreover, children will be trained to have outstanding learning skills and have a more positive attitude through participating in more exams and competitions.

✘ At this stage, children's performance might be up and down, but it's a normal phenomenon during this transition phase. Parents don't have to be worry and just need to assist children to adjust and cooperate with the teacher to help children grow healthily.

Stage of achievement: Level 5 to 7 in mental arithmetic

Children at this stage display the "character of elite." They will be more likely to be sure about their own goal and vision. They basically know what their goal is and how to reach it. They can earn

good grades and awards by participating in exams and competitions in order to enhance their self-value and sense of achievement, realising “the ability of setting a goal and self-management.”

✧ During this stage, children will have good performance from every aspect and know how to self-manage and achieve their own goals. They are likely to pass entry exams to the elite class.

Stage of peak: Level 8 to 10 in mental arithmetic

At this stage, children already have the “character of elite.” As long as they are provided with a good learning environment, they will have “peak” performance. Besides the subject of abacus mental arithmetic, they could also have excellent performance in other subjects. Since children have already provided with the character of an elite, plus excellent learning skills and an active learning attitude, they have been already provided with absolute superiority an advantage for future learning. Thus, as the parents of the children with “elite character of elite,” you just need to appreciate, praise, and care about for them in everything. They will naturally have outstanding performances in every aspect of learning.

✧ At this stage, children have already become the focal point. Their excellent learning skills and outstanding performance can be the foundation for higher level of study. As for parents, they can pay more attention caring for the family, allowing children to grow in a happy and respectful family in order to bring their potential into full play naturally.
